12.15pm	Conference wrap up
12.30pm	End of Conference

This workshop will be facilitated by Megan Chiswell –Deputy Director
Centre for Organisational Change in Person-Centred Healthcare Deakin University

In our varied roles as nurses, we frequently deal with patients (and sometimes their relatives) under stress, both physiological and psychological. We might be involved in the conversation which delivers confronting information or often, just after that conversation when the patient has had time to 'digest' the news. These conversations can be uncomfortable and stressful and are sometimes avoided as you just don't know what to say or how to say it. This workshop is an opportunity to improve your communication skills and empower you to offer your patients a more comfortable and productive discussion on cancer related issues. We can offer only a limited amount of time to our patients so making the most of the time we have by using effective communication skills will benefit us all.

You may not be a 'formal' educator however in every nursing role we are constantly educating, ourselves, our patients and their loved ones, our colleagues, our students in training. Effective communication in the setting of education is paramount. Discussion at this workshop will also include examples of education and training approaches that differ in both resourcing and complexity from awareness raising, to the development of new skills to the ability to apply new learning for behavioural change in clinician communication.

This program may contribute 4 hours towards your annual CPD requirements.
